

Fraxel re:store DUAL

HOW IT WORKS:

Fraxel re:store Dual applies microscopic pixels of infrared laser light to the skin, penetrating deep into the collagen layer while leaving the skin's surface intact. Unwanted pigment is targeted and uneven texture of the skin is improved while new collagen is formed.

DUAL

Fraxel re:store[®] DUAL

ANTI-AGING
MEDICAL & LASER CLINIC

TECHNOLOGY USED:

Fraxel re:store™ laser
LaserZimmer™ Cryo-5 cooler

TREATMENT TIME:

30-40 minutes average for full face.

HOW IT FEELS:

The skin is cooled with the Zimmer Cryo-5 air cooler and a topical anesthetic cream is applied. Oral analgesics can be used. The laser gives a heat sensation as it glides over the skin. This quickly dissipates once the treatment is completed.

WHAT TO EXPECT:

Patients who choose Fraxel laser treatment can expect to see some redness and minor swelling for several days. However, normal activities can be resumed shortly afterward. A minimum of 3 to 4 sessions is generally required, spaced 2 to 4 weeks apart. Results are visible after the first few sessions and can be maintained with 1 to 2 sessions a year.

IDEAL FOR:

Those with aged and sun damaged skin, acne scars and traumatic scars, stretch marks and melasma. The face, neck, chest, hands and forearms can all be treated.

BENEFITS:

Skin rejuvenation can be accomplished with innovative Fraxel re:store™ Dual treatment uses a dual wavelength laser to treat a variety of skin conditions anywhere on the body. Fraxel treatments allow for mild to moderate skin resurfacing of the face, neck, chest and hands. The re:store laser treats sun damage, wrinkles, scars, age spots and melasma (a patchy brown discoloration of the face).
